https://drive.google.com/drive/folders/1eJR1gGPVQiijsfq_5ibpezOZBVckSMCZ?usp=sharing**QUESTION 11**Case Study 3 - Proseware, IncBackgroundYou are a developer for Proseware, Inc. You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality.RequirementsPolicy serviceYou develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events.The application must include the Event Grid Event ID field in all Application Insights telemetry.Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing.PoliciesLog PolicyAll Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days.Authentication eventsAuthentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.PolicyLibYou have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The PolicyLib library must: Exclude non-user actions from Application Insights telemetry. Provide methods that allow a web service to scale itself Ensure that scaling actions do not disrupt application usageOtherAnomaly detection serviceYou have an anomaly detection service that analyzes log information for anomalies. It is implemented as an Azure Machine Learning model. The model is deployed as a web service.If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook.Health monitoringAll web applications and services have health monitoring at the /health service endpoint.Policy lossWhen you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment.Performance issueWhen under heavy load, the anomaly detection service undergoes slowdowns and rejects connections.Notification latencyUsers report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected.Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.You need to ensure that authentication events are triggered and processed according to the policy.Solution: Create a new Azure Event Grid topic and add a subscription for the events.Does the solution meet the goal?A. YesB. NoAnswer: BExplanation:Use a separate Azure Event Grid topics and subscriptions for sign-in and sign-out events.Scenario: Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.**QUESTION 12**Case Study 3 - Proseware, IncBackgroundYou are a developer for Proseware, Inc. You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality.RequirementsPolicy serviceYou develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events.The application must include the Event Grid Event ID field in all Application Insights telemetry.Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing.PoliciesLog PolicyAll Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days.Authentication eventsAuthentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.PolicyLibYou have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The PolicyLib library must: Exclude non-user actions from Application Insights telemetry. Provide methods that allow a web service to scale itself Ensure that scaling actions do not disrupt application usageOtherAnomaly detection serviceYou have an anomaly detection service that analyzes log information for anomalies. It is implemented as an Azure Machine Learning model. The model is deployed as a web service.If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook.Health monitoringAll web applications and services have health monitoring at the /health service endpoint.Policy lossWhen you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment.

Performance issueWhen under heavy load, the anomaly detection service undergoes slowdowns and rejects connections.Notification latencyUsers report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected.Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.You need to ensure that authentication events are triggered and processed according to the policy. Solution: Create a new Azure Event Grid subscription for all authentication that delivers messages to an Azure Event Hub. Use the subscription to process signout events.Does the solution meet the goal?A. YesB. NoAnswer: BExplanation:Use a separate Azure Event Grid topics and subscriptions for sign-in and sign-out events.Scenario: Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.QUESTION 13Case Study 3 - Proseware, IncBackgroundYou are a developer for Proseware, Inc. You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality.RequirementsPolicy serviceYou develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events.The application must include the Event Grid Event ID field in all Application Insights telemetry.Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing.PoliciesLog PolicyAll Azure App Service Web Apps must write logs to Azure Blob storage. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.PolicyLibYou have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The PolicyLib library must: Exclude non-user actions from Application Insights telemetry. Provide methods that allow a web service to scale itself Ensure that scaling actions do not disrupt application usageOtherAnomaly detection serviceYou have an anomaly

detection service that analyzes log information for anomalies. It is implemented as an Azure Machine Learning model. The model is deployed as a web service. If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook. Health monitoring All web applications and services have health monitoring at the /health service endpoint. Policy loss When you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment. Performance issue When under heavy load, the anomaly detection service undergoes slowdowns and rejects connections. Notification latency Users report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. You need to add code at line EG15 in EventGridController.cs to ensure that the Log policy applies to all services. How should you complete the code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: Status Box 2: Succeeded Box 3: operationName Scenario: Policy service You develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events. The application must include the Event Grid Event ID field in all Application Insights telemetry. QUESTION 15 Case Study 3 - Proseware, Inc Background You are a developer for Proseware, Inc. You are developing an application that applies a set of governance policies for Proseware's internal services, external services, and applications. The application will also provide a shared library for common functionality. Requirements Policy service You develop and deploy a stateful ASP.NET Core 2.1 web application named Policy service to an Azure App Service Web App. The application reacts to events from Azure Event Grid and performs policy actions based on those events. The application must include the Event Grid Event ID field in all Application Insights telemetry. Policy service must use Application Insights to automatically scale with the number of policy actions that it is performing. Policies Log Policy All Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days. Authentication events Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible. PolicyLib You have a shared library named PolicyLib that contains functionality common to all ASP.NET Core web services and applications. The PolicyLib library must: Exclude non-user actions from Application Insights telemetry. Provide methods that allow a web service to scale itself Ensure that scaling actions do not disrupt application usage Other Anomaly detection service You have an anomaly detection service that analyzes log information for anomalies. It is implemented as an Azure Machine Learning model. The model is deployed as a web service. If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook. Health monitoring All web applications and services have health monitoring at the /health service endpoint. Policy loss When you deploy Policy service, policies may not be applied if they were in the process of being applied during the deployment. Performance issue When under heavy load, the anomaly detection service undergoes slowdowns and rejects connections. Notification latency Users report that anomaly detection emails can sometimes arrive several minutes after an anomaly is detected. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Relevant portions of the app files are shown below. Line numbers are included for reference only and include a two-character prefix that denotes the specific file to which they belong. Drag and Drop Question You need to implement the Log policy. How should you complete the Azure Event Grid subscription? To answer, drag the appropriate JSON segments to the correct locations. Each JSON segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: WebHook Scenario: If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook. endpointType: The type of endpoint for the subscription (webhook/HTTP, Event Hub, or queue). Box 2: Subject Begins With Box 3: Microsoft.Storage.BlobCreated Scenario: Log Policy All Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days. Example subscription schema { "properties": { "destination": { "endpointType": "webhook", "properties": { "endpointUrl": "https://example.azurewebsites.net/api/HttpTriggerCSharp1?code=VXbGWce53148Mt8wuotr0GPmyJ/nDT4hgdFj9DpBiRt38qqnm5OFg==" } }, "filter": { "includedEventTypes": ["Microsoft.Storage.BlobCreated", "Microsoft.Storage.BlobDeleted"], "subjectBeginsWith": "blobServices/default/containers/mycontainer/log", "subjectEndsWith": ".jpg", "isSubjectCaseSensitive": "true" } } } References: <https://docs.microsoft.com/en-us/azure/event-grid/subscription-creation-schema>!!!
